

Sakha AI - Live Demo Script (OpenAI Live Mode)

URL: <https://sakhaai-roan.vercel.app/>

Mode: OpenAI live - verified, all four surfaces return source: openai

Runtime: about 5 minutes. Golden path: Priya, then Manager, then HR.

Story: KPP-grounded Career GPS. The plan is reasoned over real performance data and manager feedback, not just skills.

Pre-flight (before you walk on):

- Open <https://sakhaai-roan.vercel.app/> in a fresh tab, clean state.
 - Confirm internet is up. Live mode needs it; if it drops, the demo still works on the deterministic fallback.
 - Have a second judge-challenge goal in your pocket, for example Product Manager or Cybersecurity Lead.
 - Zoom the browser to about 110 percent so the room can read it.
-

ACT 0 - The Hook (30 sec)

Land on the home page.

Say: "Every enterprise says invest in your people. But employees do not get a roadmap, managers cannot see who is ready, and HR cannot see the whole workforce. Three blind spots, one problem.

Meet Sakha - an agentic Employee Success OS. One Digital Twin, six agents, three connected views. And critically, it reasons over real performance data - appraisal KPPs and manager feedback - not a generic skills quiz. Let me show you with a real employee: Priya, a Delivery Manager who wants to lead AI delivery."

Click into Priya's view.

ACT 1 - Employee: KPP-Grounded Career GPS (2 min). THE CORE.

Priya gets a proactive nudge. Open the chat.

Say: "Sakha speaks first - it already knows Priya's context. Watch what happens when she asks the question every employee is afraid to ask."

Type in chat:

How do I move into AI Delivery Management?

Career GPS opens. Narrate the reasoning stream as it appears.

Say: "Six agents wake up. But notice the Career Agent is not just reading her skills. It is reading her KPP record and her manager's feedback. It calls out that her gross margin missed target, that she has no AI delivery experience yet - exactly what Vikram flagged. This is reasoned live, right now."

Point at the result header.

Say: "38 percent ready today, there in 90 days, 84 percent success probability. Three real internal AI Delivery Manager roles."

Scroll to the Grounded in your performance section. THIS is the differentiator.

Say: "Here is what no other career tool does. This is Priya's actual appraisal - revenue 5.8 million against a 5.2 target, a clear strength. Margin 2.4 against 2.8, a miss. DEI 22 against 30. Sakha does not invent generic

gaps. The commercial-structuring gap comes from the margin miss. The talent gap comes from the DEI and fresher numbers. Every recommendation is evidence-backed."

Point at the Manager feedback card.

Say: "And it reads Vikram's feedback directly. His development areas - no AI delivery experience, commercial structuring, diverse hiring - become the GPS gaps. The employee's plan and the manager's review are finally the same conversation."

Point at Promotion readiness and the Self-assessment.

Say: "It even scores her promotion readiness, 52 percent today toward a 75 percent target, and auto-drafts her FY26 self-assessment from the achievement log - so she reviews, not writes from a blank page."

THE PROOF MOMENT (this wins it)

Say: "And it is not scripted. Shout out any goal."

Type whatever the room says, for example Cybersecurity Lead or Product Manager.

Say: "No demo could pre-script every career. This roadmap - the skills, the certifications, the timeline - is being reasoned live by GPT-4o against her actual Twin and performance record. That is the difference between a slideshow and an agent."

ACT 2 - Employee: Take Action (30 sec)

Go back to the AI Delivery Manager result. Mission Control.

Say: "A roadmap is nice. Sakha acts on it."

Pick target role, set hours per week, click Enable Career Autopilot.

Say: "She commits five hours a week. The agents enroll her, block her calendar, and flag her up the chain. One employee action just rippled to two other people. Watch."

ACT 3 - Manager: Vikram's View (60 sec)

Switch user to Manager, Vikram.

Say: "Same moment, different lens. Vikram is a Senior Delivery Director. He did not get an email - Sakha surfaced it."

Point at the Employee spotlight.

Say: "Here is Priya, and here is the same promotion-readiness number she sees - 52 toward 75 - with the KPP evidence right under it. Revenue 112 percent, her strength. AI delivery experience 0 percent, her gap. Vikram sees exactly why she is ready and exactly where to help."

Point at the key action.

Say: "Sakha already drafted his move - assign Priya to the AI Studio Pilot. He just approves. Human stays in control; every agent action carries an autonomy badge."

Point at Rajan in the readiness map and risk center.

Say: "And it caught what he would miss. Rajan - 8 late nights, engagement down 27 percent. That is not just a wellbeing chart now; it is a KPP. A flight risk surfaced before he resigns. That is a retention save worth a year's salary."

ACT 4 - HR: Anita's View (60 sec)

Switch user to HR, Anita, Chief People Officer.

Say: "Now zoom all the way out. Anita runs workforce strategy."

Point at the workforce gap map.

Say: "AI Delivery Managers - demand 12, supply 3. A nine-role gap most companies fix by hiring expensively."

Point at the AI Delivery Manager build-versus-buy card.

Say: "But look. Priya's one move surfaced 23 delivery managers with the exact same profile - revenue strong, commercial gap, no AI experience. Reskill them as a cohort and supply goes from 3 to 19 in 180 days. Cost, 2.3 crore. Hiring externally, 16.2 crore. A 13.9 crore saving. The cheapest, fastest talent was already inside. One click launches the cohort."

Point at the reskilling simulator and forecast.

Say: "And she can model it live - drag the cohort, watch the gap close and the rupees saved compute in real time."

ACT 5 - The Close (30 sec)

Say: "That is the golden thread. Priya asked one question. Sakha read her real performance data and her manager's feedback, gave her an evidence-grounded roadmap, started the work, made her manager act, and moved an org-level metric - all from one Digital Twin and six agents.

It runs on OpenAI GPT-4o live, but it never breaks: every surface has a deterministic fallback, so the demo works even with no signal. Enterprise-grade reliability and real intelligence.

Sakha turns employee goals into workforce transformation. Thank you."

What is new since v1 - lead with these

- KPP-grounded GPS. The plan is justified by real appraisal data, not a generic skills matrix. This is the headline.
 - Manager feedback in the loop. Vikram's review feeds the employee's plan; the same promotion readiness shows in his spotlight.
 - Promotion readiness and auto-drafted self-assessment, visible to employee and manager.
 - All three personas are evidence-grounded - Priya, Arjun (trainee scorecard), Rajan (burnout shows up as a KPP).
 - HR build-versus-buy: Priya's move scales into a 23-manager cohort and a 13.9 crore saving.
-

Quick Reference - Live OpenAI Endpoints (all verified source: openai)

Surface	Trigger in demo	Proves
Career GPS	Any career goal	Personalized reasoning over the Twin and KPP record
Chat	Any off-script question	Real conversational agent

If a judge pushes back

- Is this hardcoded? Type any goal or question yourself. There is no script for it. Only a live model grounded in her Twin and performance data can answer.
- Does it really use the appraisal? Yes. The live prompt includes every KPP and the manager feedback, and is instructed to ground each gap in that evidence and not invent generic ones.
- What if the API is down? It falls back to a deterministic Twin model. The demo never breaks. Watch the badge: Live OpenAI versus Local Twin model.
- What does it cost to run? Pennies per session, about four cents for a full demo. Negligible at enterprise scale.

Recovery moves (if something stalls live)

- Career GPS slow? Keep narrating the reasoning stream. It streams progressively.
- Chat hangs? Use the scripted golden question, How do I move into AI Delivery Management. It is instant and never calls the API.
- Whole site down? Persona switching and the golden path still render from local data.

Persona Cheat Sheet (for off-script questions)

- Priya Sharma - Delivery Manager, E4, Chennai, 18 yrs, manager Vikram, goal AI Delivery Manager. KPPs: revenue +600K strength, margin -400K gap, DEI 22 vs 30. Promotion readiness 52 toward 75.
- Vikram Nair - Senior Delivery Director, E5, Priya's and Rajan's manager, team health 84.
- Anita Desai - Chief People Officer. AI readiness 38, AI Delivery Manager demand 12 versus supply 3.
- Rajan Krishnan - Senior QA Engineer, E3, Bengaluru, at risk: 8 late nights, engagement -27 percent, now a KPP. Goal Automation Architect.
- Arjun Mehta - Graduate Trainee, E1, Noida, Day 8, AI Engineering track. Onboarding scorecard, fastest first commit.

Key numbers: Priya 38 percent, 90 days, 84 percent, promotion 52 to 75. Team 84. Org 38 readiness, AI Delivery Manager 12 versus 3, cohort 23, saving 13.9 crore.
